

## Using Coloured Overlays

Coloured overlays help in a variety of situations. At Brigshaw we have selected the 6 most popular colours as presets.

1. Open the Start Menu by clicking the windows icon in the bottom left or by pressing the windows key on the keyboard. Scroll down the list to the overlays folder, and expand it by clicking on it.

2. You can now select any of the 6 colour presets to start by clicking on them. A window will pop up explaining how to operate the software and the overlay will start.

3. The settings can be adjusted by right clicking on the icon in the notifications area. Any changes that you make will not be saved to the preset so you will need to adjust it each time you use the software.
4. You can quickly disable the overlay by left clicking on the icon or by pressing Ctrl & F11. Press again to re-enable it.

If you have any questions or feedback please come visit the IT Workshop upstairs in Delacy.
